

std::runtime_error

```
classDiagram
    FileCorruptError --|> std::runtime_error
```

The diagram illustrates an inheritance relationship. At the bottom is the 'FileCorruptError' class, represented by a box with three horizontal compartments. The top compartment contains the class name 'FileCorruptError', the middle compartment is empty, and the bottom compartment contains the public constructor '+ FileCorruptError()'. Above it is the 'std::runtime_error' class, represented by a box with three horizontal compartments. The top compartment contains the class name 'std::runtime_error', and the two lower compartments are empty. A blue arrow with an open triangular head points from the 'FileCorruptError' class to the 'std::runtime_error' class, indicating that 'FileCorruptError' inherits from 'std::runtime_error'.
